

## Staff Care Services Testimonial

CSG Managing Waste has recently used Staff Care Services to carry out the health surveillance for thirty four employees across our five waste sites in Kent. As the waste industry is considered a high hazard business it is important to ensure the health and welfare of our employees is monitored on a regular basis. The surveillance carried out was skin surveillance, audiometry, and lung function testing. Staff were also offered a course of Hep B vaccinations.

I have found Staff Care Services to be extremely professional in their approach to the service they provide as well as flexible in realising our facilities must be operational at all times; it was very much a 'work with you' approach to organising appointments with many staff members commenting on how relaxed they were made to feel which will hopefully encourage them to participate in future examinations.

I would highly recommend their services.

Yours Sincerely,

Nick Webb  
Waste Services Manager
